Introduction

This project is based on Digital Literacy, where I worked as a Student Digital Ambassador. Our main idea is to help students understand how to use these tools in a smart manner. In today's world, digital skills are very important for studies, future opportunities etc. If we talk about this project I completed different tasks like making an infographic, creating online profiles, working on different coding platforms, writing professional emails and learning about cybercrime. By completing each task I learned something new and was able to improve my digital skills. This report explains all the task work I have done and what I learned from it. This report file also shows that how the digital skills will help me in my professional life.

Task 1: Infographic Write-up

For this task that was making an infographic I used ***Canva*** because it is very easy to use and it also has lot of ready-made designs and layouts. In my infographic I tried to explain digital literacy in a simple and understandable manner by dividing the content into different sub-parts like what digital literacy means, useful tools for students, safe internet practices, and how to build a professional online presence etc.
I used simple design elements like icons, colours, and headings to make it easy to understand the main idea behind the infographic. My main goal of making the infographic visually attractive, appealing and informative. The challenge which I faced was selecting the right content and fitting it in my infographic with all the designs without looking it messy. It was a very difficult task for me to manage all the layout but at the last I was able to do it. This task helped me to understand how to present something clearly and creatively. The most enjoyable part of this task was selecting colours and different layouts that were present in the app as it made the poster look more appealing.

Task 2: Digital Portfolio Write-up

For this task I created my profiles on GitHub, LinkedIn, and Kaggle. Each platform has its own speciality and specific features by which they can support my future growth. On GitHub I firstly made a profile ***README*** where I added my name, branch, college name and a short line about my goal as we all know GitHub is used to store and share coding projects. On LinkedIn I completed my Education section by adding my degree, college name, and graduation year as it is used for professional networking and

internships. On Kaggle I explored datasets which gave me an idea of how data science works. For the next four years I have planned to stay active on these platforms by sharing projects on GitHub, building connections on LinkedIn and improving my skills through Kaggle. This task will really help me to grow both academically and professionally.

Task 3: Platforms Write-up

For this task I worked on both coding platforms ***(HackerRank and CodeChef)*** which helped me to learn in more practical manner. Firstly in part A I created an account on both the coding platform and solved a beginner-level problem. As it was my first experience solving a coding challenge it helped me to understand how coding platforms work and how we can solve a problem in a specific time interval.
It also gave me confidence to try more challenges in the future. Secondly in part B I created a ***Google Form*** based on a Digital Literacy Awareness Quiz. I have added five questions which include multiple choice and short answer type question. I also linked the responses to a Google Sheet which helps me see the responses in well structured manner. These tools are very useful for my academic and professional growth. Coding platforms will help me to improve my problem-solving and programming skills but on the other hand google forms will help me in collecting, analysing, data in a well structured manner. This task showed how technology can help in learning and collaboration.

Task 4: Email Etiquette Write-up

We all know that good communication is very important in college and professional life. Many of the students make mistakes while writing emails some of the common mistakes are like not adding a subject, using informal language. A common example of poor digital communication is if a student sends an email to a professor without a proper greeting or structure, it may look unprofessional and may not get a suitable response to your mail. For example, sending a message like “Send assignment fast” to a professor is not appropriate. To avoid these digital communication mistakes emails should always have a clear subject, polite greeting, and respectful ending. Good communication helps in creating a positive impression. This task taught me how to write professional emails and follow proper etiquette online. I learned that simple and polite communication creates a good impression.

Task 5: Cybercrime Write-up

While I was learning this topic, one thing that came to my mind that ***Cybercrime*** is not always about hacking. Many attacks by the hackers are successful because people panic and act without thinking. Attackers often find methods through which you rush and make mistakes. While working further on this topic I learned about cybercrimes like online payment fraud and scams. Many people become victims because they are not aware of these scams. Simple mistakes like sharing OTPs or clicking unknown links can lead to be trapped. One habit that I will surely change is being more careful before clicking any links and sharing sensitive information online. After learning this, I will be more careful while using the internet. This task helped me to be more aware and responsible while using digital platforms.

Conclusion

This project helped me to improve my digital literacy skills. By going through the project I was able to learn how to use online platforms, communicate professionally, and stay safe from cyber threats. Each task has given me a practical knowledge that will be useful in my academic and professional life. I was able to understand how to use different tools, create a professional profile, and communicate properly. All these skills will help me in my studies and future career. This project also increased my confidence in using digital platforms. Overall I felt it was a very intrusting learning experience.

Some Learning Outcomes in reference to this project are:

Improved understanding of digital literacy concepts

Learned to use professional platforms like GitHub, LinkedIn, Kaggle

Developed communication skills through email writing

Gained awareness about cybercrime and online safety

Understood use of tools like Canva, HackerRank, and Google Forms
